ABSTRACT

PROCEDURE FOR SETTING UP A CALL IN A WIRELESS LOCAL LOOP

Procedure for setting up a call in a wireless local loop, which is based on mobile communication technology and in which terminal units (TU) are connected via a radio link to an access node (AN) and from the access node to a wired network local exchange (LE) via a standard V5 interface and in which checking functions consistent with a mobile communication specification are carried out. To accelerate call setup, checking functions are carried out during voice mode connection of the call.
